PROFESSIONAL SUMMARY

AI/software engineer with production experience in agentic systems, full-stack platforms, and applied ML. Brings depth in LLM agent architectures, human-in-the-loop workflows, and cloud-native deployments across web, mobile, and AI systems.

EDUCATION

University of Texas at El Paso

Bachelor of Science in Computer Science, Minor in Mathematics. Research: SVM music-key classification with audio feature extraction and PCA; LunarLander RL experiments with DQN, PPO, replay buffers, reward shaping, and multi-seed evaluation.. GPA: 3.4.

2025

Relevant Coursework: Algorithms, Databases, Software Engineering, Artificial Intelligence, Machine Learning, Computer Security

EXPERIENCE

AI Engineer Intern

2026 – Present

Workforce Solutions Borderplex

Remote

- Advanced into Phase 2 Waifinder OS, contributing to a 2-agent Sales/Platform MVP with a shared Anthropic Messages API loop, typed contracts, and Postgres-backed session memory.
- Co-designed the agent I/O contract and human-in-the-loop state machine: chips, structured embeds, persisted review gates, talk-to-human escalation, and grounding guardrails.
- Built 4 Platform Agent action paths covering signature hand-off, live-roadmap updates, SOW amendments, and delivery sub-agent orchestration using dry-run-first tool execution.
- Hardened AI behavior via Langfuse-ready tracing, cost/model-routing seams, modular agent skills, golden-conversation evaluation harnesses, and pytest coverage.

Software Engineer

2023 – Present

Centro de Apoyo para la Familia A.C.

Ciudad Juarez, Mexico

- Built a multi-role case-management platform supporting 7 role types across a Go/PostgreSQL API, Next.js admin portal, Flutter client portal, and SvelteKit public site.
- Designed REST APIs across 200+ route registrations and a 24-table schema with 130+ indexes covering case intake, appointments, documents, notifications, payments, and reporting.
- Developed role-aware dashboards, case timelines, document upload/preview, WebSocket notifications, and Stripe webhooks.
- Owned deployment across AWS/Vercel and self-hosted Docker/PostgreSQL, including health checks, rate limiting, S3 storage, and smoke/integration/performance tests.

PROJECTS

Entorno35

Full-Stack Personal Project

- Built a multi-tenant NOM-035 compliance SaaS with Go/Gin REST APIs, hexagonal architecture, PostgreSQL/GORM, JWT auth, tenant isolation, CSV staff import, automated assessments, and PDF reports.
- Shipped a Next.js/React dashboard with Stripe subscriptions, TanStack Query, Docker/Portainer deployment, and visual-regression coverage.
- Hardened production readiness with webhook idempotency, rate limiting, pending-registration cleanup, SMTP invitations, and verified lint/test/build quality gates.

MyCloud

Full-Stack Personal Project

- Architected a self-hosted media cloud with a Go Clean Architecture backend, Flutter web/mobile client, PostgreSQL, Redis, MinIO/S3, Docker, and REST/WebSocket APIs.
- Secured media workflows: JWT sessions, RBAC/admin invites, presigned uploads, ClamAV scanning, and WebP thumbnails.

SKILLS

AI / ML Engineering: LLM agents, agent orchestration, tool/API integrations, structured outputs, guardrails, evals, observability, SVM, RL

Languages: Python, TypeScript, Go, JavaScript, C#, Java, HTML/CSS

Backend & Data: REST APIs, FastAPI, Go/Gin, PostgreSQL, Redis, SQL, Firebase, GORM, JWT/RBAC, multi-tenant systems

Frontend & Mobile: React, Next.js, Angular, Svelte, Flutter, TanStack Query, WebSockets, responsive dashboards

Cloud / DevOps / Quality: Docker, Linux, AWS, Vercel, Terraform/OpenTofu, CI/CD, smoke/integration tests, documentation
